

# 16-Sep-2022 Team Meeting

**Date:** 16th Sep

**Time:** 2pm - 4pm

**Location:** Zoom

## Attendees:

- Edward
- Haoxin
- Ray
- Yifei

## Agenda

1. Make sure Edward agrees on the following topics:
  - a. Getters at frontend for Lazy Load
  - b. No identity map -> either you make one extra call, or you use hidden fields
  - c. Unit of Work -> Luke's screenshot
  - d. Db connection: 10 of them, unit of work will get one. Rest who does not need Unit of Work keeps going.
2. How's everyone doing error handling?
3. Merge branch in dev so that Yifei can finish auth
4. Which class should be responsible for creating an order from a listing?

## Discussion

Other decision:

1. Auction has a quantity field - default to 1
2. Admin can't delete a finished Auction
3. Admin can delete a fixed-price listing, it just means that the archived field == true. Sellers can't see it once the listing becomes archived. Deleting listings does not delete corresponding orders that are already placed with the order.
4. We assume getters in the frontend can find the object, because the get ALL would already have got it and database constraints that fields must not be empty.
- 5.
- 6.

## To-Do

Haoxin:

- Pop-up
-
