

31-Aug-2022 Team Meeting

Date: 31st August

Time: 5:15 - 6:15pm

Location: Tutorial Room

Attendees:

- Edward
- Haoxin
- Ray
- Yifei

Agenda

- Questions to ask Luke:
 - Should we include the target folder in Git? There's a file in there that is used by Heroku? https://cis-projects.github.io/swen90007_course_notes/first_java_app/maven.html#maven-compile
 - Just out of curiosity - .idea: yes or no on .gitignore?
 - Testing backend - do you have a recommended approach?
 - Patterns: MVC + Controller pattern - need to document them?
 - Requirements:
 - Onboard seller: make an buyer into a seller?
 - Create empty seller group?
 - Remove the last person from the seller group and therefore the seller group just disappeared?

Minutes

Decisions made during Team Meeting

Notes

- Connection class -> singleton class -> a pool of connection objects (an ArrayList)
-> create and close the connection object whenever the mapper need it/complete
- no testing is needed
- Document MVC if we have time
- Onboard sellGroup -> bring up the seller into the system -> the users are preloaded into the system and the admin will make this is as a seller
- There could be an empty seller group in the system
