05-Aug-2022 Team Meeting

Date: 5th August
Time: 2 - 3pm
Location: Zoom

Attendees:
- Edward
- Haoxin
- Ray
- Yifei

Agenda
- Read requirements of Market Place and brainstorm what requirements are needed
- Divide assignment task

Minutes

Brainstorm the requirements

- We have decided to include Visitor as a user type. The key difference between Visitor and Buyer is that Visitor can browse the goods without logging into an account.

Assignment tasks division

- Edward: Domain diagram (since he has already started working on it)
- Ray, Yifei, Haoxin: Use cases + Use case diagram

The reason behind this uneven division was that there are lots to do involving the use cases, compared with the domain diagram. Therefore we believe that three people are required on use cases.

How to upload documents to GitHub

- No pull request is required when we want to upload documentation (e.g. diagrams, meeting notes) on GitHub. New documents can be pushed directly to the master branch.

Summary of questions to ask Luke on Wednesday:

- If we want to create extra features, should we include that in the "part1" assessment?
- Is it a requirement for us to follow Agile development life cycle?

Action Items

- ☑ ~~Haoxin, Yifei, Ray to have a meeting to achieve an agreement on how to write use cases.~~
- ☐ Haoxin needs to finish up her local development set up
