10-Aug-2022 Team Meeting

Date: 10th August
Time: 5:15 - 6:15pm
Location: Tutorial Room

Attendees:
- Edward
- Haoxin
- Ray
- Yifei

Agenda
- Repository Structure
- Repository branches - protected development branch? Naming convention?
- Admin use cases - is "monitor the system" too vague?
- Questions to ask Luke:
  - Use case granularity - how detailed? Should we describe something with "Clicking the X button"?
    - No. Detailed enough to help others build it (I know-ish what to build)
  - Are we allowed to use 3rd party authentication system?
    - Library - therefore it won't be an actor
    - Database is never an actor.
  - The template: it says it should always be kept on GitHub?
    - Google Drive is fine, final submission.
  - If we want to create extra features, should we include that in the "part1" assessment?
    - Can't lose or gain marks for having extra features.
    - But if you can see doing it, then might as well.
  - Is it a requirement for us to follow Agile development life cycle?
    - No requirements
  - **What's the part 2 template (use case) used for?**
    - Stil unclear.

Minutes

Use case

- The first set of Admin use cases is fine.
- The level of details
  - search is implicitly expected,
  - email is not - just say user can view the purchase in history.
- Finalise use cases by Friday to make sure they align
- We are allowed to make assumptions - therefore we will have 1 listing can only be managed by 1 seller group (i.e. a company). But one account can belong to >= 1 seller group.
- Concurrency will be there for:
  - fixed price
  - seller+user modifying at the same time
  - sellers manage one listing at the same time
  - We must allow people to edit things at the same time

Final decisions
- ☐ Finalise use cases by Friday
  - ☐ We will follow the 2nd template with the alternative/exceptional flow
    - ☐ No exceptional flow
    - ☐ Alternative Scenario - does not matter if it's paragraphs or steps
      - ☐ Make sure we only have 1-2 alternative scenarios
  - ☐ Additional feature, which one do we keep
- ☐ Friday 11am with use case with Yifei + Ray
- ☐ Edward - Domain model description
