03-Aug-2022 Team Meeting

Date: 3rd August
Time: 5:15 - 6:15pm
Location: Tutorial Room

Attendees:
- Edward
- Haoxin
- Ray
- Yifei

Agenda
- Assigning roles
- Discuss Project
- Delegate tasks for Project

Minutes

Tutorial Content

- We need to create a repository (Daniel has done it)
- Reminder: remember to take meeting minutes each week and save them to GitHub
- Tutorial will just be primary project work
- The handbook are useful in three main ways:
  - FAQ
  - Intro to Java (there is a mini program to get us started if we want)
    - JSP and Servlets (highly recommended)
    - Introduction to Maven (highly recommended)
  - 2021.3 for IntelliJ IDE
  - Please use the templates - save lots of headache
  - PlantUML - an easy way to create UML diagrams for part 1 (the specific link is in Workshop 1)

Decisions made during Team Meeting

- Instead of having specific roles, we decide to discuss what tasks

- ○ Watch over GitHub for each part
  - ○ Taking minutes (we will take turn)
- Decided to do standup at the start of each meeting
- We have decided to use the tool Luke demonstrated (PlantUML) to draw the diagrams
- Ray created an Idea file, to jot down ideas about the system on that page.

Clarification on Part 1 Assessment with Luke

1. Question: Use cases: capturing functional + non-functional requirements?
   a. Answer: No non-functional requirements
2. For the use case: do we only need to add the Basic Flow, or should we include "Alternate Flows" as well?
   a. Answer: Yes, we can add Alternate flow
